WBS Dictionary

WBS NUMBER						TITLE	DESCRIPTION
L1	L2	L3	L4	L5	L6		
1	03	07				Linac Installation & Alignment	This WBS section covers the reception of parts, components, and sub assemblies from either a Post Processing & Testing or a Rack Integration activity. Installation begins at beneficial occupancy or at a planned SLAC Linac downtime and completes all necessary activities prior to the start of commissioning. These activities are, but not limited to, mechanical installation of beam line components, installation of vacuum components, alignment, vacuum pump down, vacuum leak checking and functional testing of components and all of their respective control systems. Management of project installation activities are not covered in this section. Those activities are covered under WBS 1.3.1, System Management & Integration. This WBS section also covers the removal and/or relocation of existing SLAC Linac beam line components to make room for new LCLS Linac components such as magnets, vacuum components, RF components and diagnostic instruments.
1	03	07	06			Linac LTU System Installation & Alignment	This WBS section identifies and collects the resources and costs associated with the removal and/or relocation of SLAC FFTB beam line components and the installation of all LCLS Linac beam line components in accordance with the activity description above.

1.3.7.6 – BOE for this control account is based on 2006 installation experience (actual injector installation cost was $1.62M and actual Linac installation cost was $1.82M.) Also, cost estimate for LTU installations were based on resource loading estimate from top down and bottoms up using Accelerator department downtime resource loading.

Cable installations cost is based on number of cables, types, lengths and number of racks required. Electrical cost data (means book) was used to calculate cost for contractor to install required cables.
